

VN-755IP

Through the use of the ViconNet platform, the VN-755IP supports a powerful range of software capabilities not found in most IP video products. ViconNet is a powerful software application designed specifically to support digital video systems that include IP video products, digital recorders, Network video recording and remote workstation control and configuration.

From a ViconNet Workstation, the VN-755IP offers the following:

- Remote configuration of frame rate transmission from 1-25 fps when using just the local camera and up to 15 fps when using as a server with its external inputs
- Remote configuration of image quality settings from 352 x 136 to 704 x 544
- Recording and playback on standard PC HDD
- User Authorization levels and Primary/Secondary control process
- Creation of permanent archives on hard drives or CD/DVD media
- Smart Search (Museum Search) of recorded data
- Video loss, Motion Detection and 4 alarm inputs can trigger alarms and start recording sequences
- One audio channel per camera
- Marco-based recording and display options
- Simultaneous viewing from up to 5 NVR workstations
